May 2021

SW developer for encryption solutions.
Do you have a passion for IT security and SW development?

Dencrypt expands the team of SW developers in Aalborg (at Novi) or Hvidovre. If you want to use your skills to develop solutions for encrypted communication, then become part of an innovative company in growth.

We offer:
An opportunity to apply and further develop your competencies within SW development and IT security to develop new functionality and services for our back-end server systems, which support dynamically encrypted mobile calls and chat. You become part of a team of 10 experienced developers who work with the latest technologies and where the professionalism is excellent. You can apply your knowledge and help develop state-of-the-art technology for our encrypted communication products and solutions used by the Danish Defense, NATO, and others.

We have an open and informal working day with delegated responsibility. Still, we help and support each other to achieve a common goal. You get a unique opportunity to influence the development of a small company with strong growth potential.

The job:
You get a central position within:
- Design, implementation, and testing of functionality for our server systems.
- Maintenance and further development of build environments and test systems.
- Web development for user and server administration.

As part of our teams in Aalborg and Copenhagen you are involved in the entire development process and contribute to all phases from idea and concept development over implementation to testing and release. You work in our agile team, where we use Kanban in our daily work.

Apply for the job if you ...
- have a passion for SW development and IT security,
- are quality-conscious and only consider a job done when reviews of code, test and documentation are successful,
- thrive on changing work assignments and where you get in touch with many technologies,
- are a team player, but can also work independently,
- have the courage and desire to learn new things.

Your skills and personality:
The ideal candidate is a skilled SW developer. You may have graduated recently or have some years of relevant work experience. You have an academic background, such as an engineer or computer scientist emphasising SW design, IT architecture and IT security. You are an efficient programmer and have worked with one or more of the following technologies:
- C ++, Python
- Development tools like Make, CMake, Autoconf / Automake, Git, CI
- Linux, primarily Debian and Ubuntu
- SQL

and may have experience with:
- PHP, JavaScript, CSS, HTML
- Web services/applications, REST API
- SIP-based VoIP
- Docker

You are ambitious and put your mark on work and the workplace. You are able to immerse yourself in your tasks, work in a structured way and have a sense of quality in both code, testing and documentation. You like to work in geographically dispersed teams and communicate at a high level in English, in writing and orally,.

It is a requirement that you can be security cleared by the Danish Defense Intelligence Service.

About Dencrypt

Dencrypt A/S specialises in developing and providing secure communication solutions based on the principle of Dynamic Encryption. Our mission is to enable everyone to communicate in confidence. We combine advanced encryption technology with user-friendly operation. Dynamic Encryption is an invention of Lars Ramkilde Knudsen, professor in cryptology at the Technical University of Denmark.

Dencrypt is a Danish company with offices in Copenhagen and at Novi in Aalborg.
