Dencrypt Connex

Version 1.7.0-3674

Overview

The release add new features for sending replies to messages, reacting to messages with emojis and searching for chat rooms, messages and attachments. The release also improves the overall performance of the app and fixes various bugs.

Features

- Add additional details on latest locations view
- Add support for sharing logs directly in the app
- Add support for deleting multiple rooms
- Add support for message replies
- Add support for receiving and sending emojis
- Add support for viewing all attachments sent in a chat room
- Add support for searching for messages, chats and attachments
- Add support for animated gif images
- Add support for swiping between images in the image viewer
- Show call state for group call participants

Improvements

- Improve performance of search functionality in contacts
- Redesign settings with a new open source license viewer
- Improve english translation of maintenance mode
- Improve zoom functionality in the image viewer
- Remove ICE configuration from app
- Voice messages are sent instantly by default (can be controlled from settings menu)
- Show a placeholder notification until message content has been downloaded

Bug Fixes

- Fix reappearing authentication dialogs
- Fix various minor issues in the UI
- Fix forgotten video camera direction during a call if it was re-enabled
- Fix issue where neither send message nor the record voice button was displayed
- Only allow one chat room to be swiped at once in the chat room list

Known limitations

- The app crashes in the in-app camera when the device is rotated
- Emojis may occasionally not be received
